Intellectual Property Rights (IPR) Cell

The Intellectual Property Rights (IPR) Cell is established to promote awareness, protection, and commercialization of intellectual property generated within an institution. The formation involves the following steps:

1. Approval by Management:

The institution's governing body/academic council approves the establishment of the IPR Cell as a statutory or functional unit.

2. Constitution of the IPR Cell:

The cell is constituted with a Chairperson (Principal/Director), an IPR Coordinator, faculty members from different departments, legal/IPR experts, industry or incubation representatives, and student members.

3. Defining Objectives and Policy:

The institution formulates an IPR policy outlining ownership, revenue sharing, confidentiality, disclosure procedures, and commercialization of IP created by faculty and students.

4. Awareness and Capacity Building:

The IPR Cell conducts workshops, seminars, training programs, and awareness campaigns on patents, copyrights, trademarks, and designs.

5. IP Identification and Protection:

Facilitates identification of patentable work, assists in prior-art search, filing of patents/copyrights/trademarks, and liaison with patent offices and legal agencies.

6. Commercialization and Industry Linkage:

Supports technology transfer, licensing, startups, and collaboration with industries and incubators for commercialization of intellectual property.

The formation of an IPR Cell helps in protecting innovations, encouraging research culture, and transforming academic research into societal and economic value.
